

Executive MIS Reporting & Analytics Platform

Manufacturing Operations Monitoring & Reporting System

Overview

This portfolio showcases the Executive MIS Reporting & Analytics Platform that I designed and developed during my internship. The solution centralized operational reporting, automated reporting workflows, and replaced multiple disconnected spreadsheets with interactive dashboards supporting daily business operations and management reporting.

Portfolio Note

Business information has been anonymized to protect confidential company data. Dashboard design, reporting workflow, and implementation remain unchanged and represent my actual internship work.

Key Features

- Executive MIS Dashboard
- Production Reporting
- Inventory Management
- Dispatch Analytics
- Procurement & Stock Monitoring
- Energy Monitoring
- Google Sheets
- Looker Studio
- Google Apps Script
- Reporting Automation

Project Overview

Executive MIS Reporting & Analytics Platform

Objective

Designed and developed a centralized Executive MIS Reporting & Analytics Platform during my internship to replace multiple disconnected spreadsheets with a unified reporting system for daily operational monitoring and management reporting.

My Role

- Gathered reporting requirements from stakeholders.
- Designed and developed the Executive MIS reporting platform.
- Built multiple interconnected dashboards.
- Standardized business KPIs.
- Automated reporting alerts and data validation using Google Apps Script.
- Developed interactive reports for daily operational monitoring.

Tools Used

- Google Sheets
- Looker Studio
- Google Apps Script
- Advanced Excel

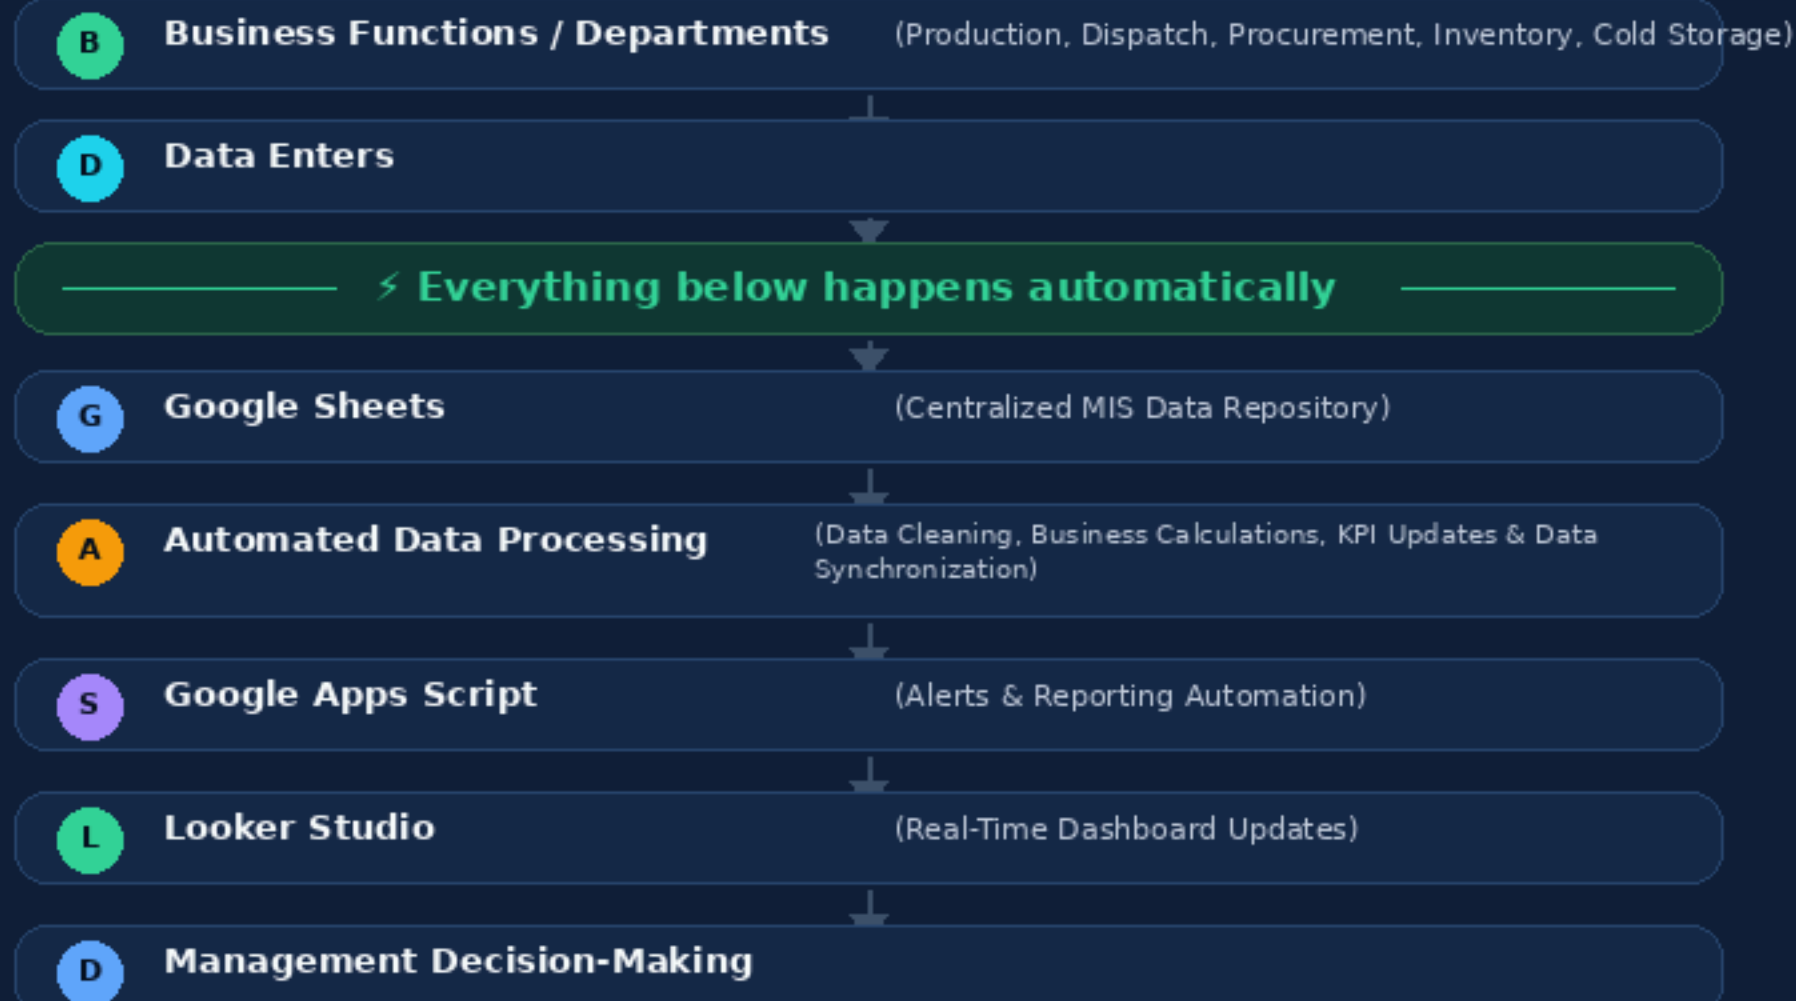

Reporting Modules

- Executive MIS Dashboard
- Dispatch Dashboard
- Production Reporting
- Powder Inventory Dashboard
- Liquid Inventory Dashboard
- Cold Storage Dashboard
- Energy Monitoring Dashboard
- Operational Reports

System Architecture & Reporting Workflow

How the MIS reporting system operates

Reporting Workflow

Key Features

- Centralized MIS Reporting
- Real-Time Dashboard Updates
- Interactive KPI Dashboards
- Reporting Automation
- Operational Monitoring
- Executive Reporting
- Inventory & Dispatch Tracking
- Energy Monitoring

Manufacturing Executive MIS Dashboard

This portfolio version has been anonymized to protect confidential business information. Dashboard design, reporting workflow, and implementation remain unchanged.

The Sankey diagram illustrates the flow of energy from various sources to different end uses. The diagram is divided into three main sections: 'Energy Sources' on the left, 'Energy Conversion' in the middle, and 'End Uses' on the right. The 'Energy Sources' section includes 'Coal', 'Natural Gas', 'Oil', 'Nuclear', 'Renewables', and 'Others'. The 'Energy Conversion' section includes 'Power Plants', 'Industrial Processes', and 'Transportation'. The 'End Uses' section includes 'Residential', 'Commercial', 'Industrial', 'Transportation', and 'Electricity'. The flows are represented by colored lines connecting the sources to the conversion and end use stages.
